Everything  
you need for  
secure & efficient  
online voting

BROCHURE

Invote Pro *makes online voting:*

### Simple

- Customize the platform to your electoral needs
- Integrate with your authentication system (SAML)
- Results are tabulated automatically

### Secure & Verifiable

- Each ballot is encrypted before transmission
- Confirmation receipts are sent to voters after voting
- Extended auditability capabilities for transparency

### Efficient

- Organize complex elections of any size
- Self-manage the solution once trained
- Reduce time needed for planning and organizing

## Main *benefits*

Invote Pro offers cutting-edge online voting capabilities that **streamline** any voting process with all the features necessary to simplify even the most complex elections, including capabilities for **multiple ballot types** and **weighted voting**. The solution also easily integrates with paper voting channels for a hybrid election and maintains electoral security at all times.

Voters can access the voting portal from **any device** connected to the internet, **increasing accessibility** and helping to **boost turnout**, and cast **secure ballots** that are backed by end-to-end **encryption** technology. Results are calculated automatically when the election is over, can be published online with **intuitive graphics** to detail participation, and are **completely verifiable** to prove accuracy.

---

## How does *it work?*

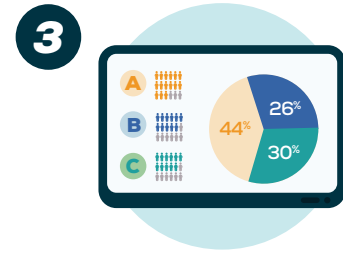

### Prepare

A **project manager** from our team will help you set up the online voting platform with your election information and specifics. Then, **unique credentials** are securely sent to each eligible voter so that they can access the voting portal on election day.

### Vote

Voters cast their ballots from the voting portal with just a few simple clicks. Ballots are **encrypted** directly on the voter's device to prevent tampering of any kind. Voters also receive a **confirmation receipt** which they can use to verify that their ballot has been correctly transmitted.

### Count

When voting is over, the encrypted ballots are shuffled and securely decrypted, ensuring that **votes cannot be linked to the voters** who cast them. The ballots are then counted and reported to election officials, who can then **verify** them and **publish** them online.

---

## The *cost*

*Up to 70% savings and an average of 34% cost reduction when moving from traditional paper-based processes to modern, digital elections.\**

\*3-year ScytI customer average
